Work Experiences

- **SRI International** Menlo Park, CA
Research Intern, at Computer Science Laboratory, Jun. 2020 – Sep. 2020
- Designed and implemented an enterprise-wide radio situational awareness system
- Passively collected radio traffics, including Wi-Fi and Bluetooth, analyzed by deep learning

Research: Cloud Networks & SDN

- **Network Optimizing for Microservices/Serverless Cloud** (work in progress) 2020 – Present
- Microservices/Serverless architectures bring flexibility but introduce network communication delay
- Designed systematic metrics to provide a benchmark for the microservices network performance
- Integrated **QUIC** into **OpenFaaS/Kubernetes** to improve serverless network performance
- **Generic Security Policy Enforcement System for SDN-based Cloud** 2017 – 2018
- Designed a **policy language** for resource protection and management of SDN-based Cloud
- Implemented in the **OpenDaylight** controller, and deployed on **OpenStack**
- **Routing Policy for Solving Reactive Model Overhead of SDN** 2016 – 2017
- Proposed a routing policy to reduce the SDN control channel bandwidth consumption up to 80%
- Implemented in the **Floodlight** controller under the **OpenFlow** protocol with **Open vSwitch**
- Deployed on the ONetSwitch, an OpenFlow/P4 white-box switch with **Xilinx FPGA**

Research: Formal Methods for Network Protocols

- **Formal Verification and Vulnerability Detection of LTE/5G Protocols** 2019 - 2020
- Used **TLA+** to formally specify the emergency call systems in **4G/5G** cellular network protocols
- Built a **complete cellular network testbed** (USRP, OpenAirInterface) for real-world verification
- Discovered serious availability and security issues in real world, **acknowledged by major carriers**
- **Formal Secure Configuration Search for Network Protocols** 2020 - 2021
- Traditionally, researchers use secure properties to verify a protocol is safe or find counterexamples
- We convert this decision problem into a search problem. Given the model and the properties, we search the boundaries of the configuration space where the system is always secure and reliable
